

The National Fire Prevention Association, or NFPA, is an international non profit organization whose mission is to reduce the worldwide burden of fire and other hazards on the quality of life by providing consistent codes and standards, research, training and education.

Established in 1986, NFPA is the leading advocate for fire prevention and a valid resource for public safety. NFPA has developed and published more than 300 consensus codes and standards intended to minimize the risks associated with fire.

This codes associated with the hazardous materials storage industry are as follows:

NFPA 30: Flammable and Combustible Liquids Code is divided into six chapters: General Provisions, Tank Storage, Piping Systems, Container and Portable Tank Storage, Operations and Referenced Publications. This code contains information for the design, construction and testing of flammable liquid safety cabinets.

NFPA 30A: Automotive and Marine Service Station Code contains nine major areas; General Provisions, Storage, Piping Valves and Fittings, Fuel Dispensing Systems, Pits and Below Grade or Sub Floor Work Areas, Service Stations within Buildings, Electrical Equipment, Operational Requirements and Referenced Publications.

NFPA 395: Standard for the Storage of Flammable and Combustible Liquids on Farms and Isolated Constructions Projects.

NFPA codes are recommended for use as the basis of legal regulations. To verify compliance, contact all applicable local, state and federal agencies.
