

State Approval Requirements

This chart is representative of what is specified per each state for "closed construction" structures. This refers to any building that requires insulation or other material that covers the wall cavity so that the electrical configuration is not exposed for inspection. Ultimately, your building inspector or other local official, will be the final authority having jurisdiction. For more information about the specific approval requirements in your state or area, contact your local building inspector and/or fire marshal.

State:	Inspection By:	Design Approval By:
Alabama	Third Party	State
